ASSIGNMENT 2

1

KOLLI RAVI

1 Problem

If A is a square matrix such that $A^2 = A$, then $(I + A)^3 - 7A$ is equal to

- (A) A
- (B) I A
- (C) *I*
- (D) 3A

2 solution

Given
$$A^2 = A \implies A^2 - A = 0$$

Let λ is the eigen value then theevery eigen value satisfies its very own characteristic equation

$$\implies \lambda^2 = \lambda \text{ then } \lambda^2 - \lambda = 0$$
(2.0.1)

Then
$$(I + A)^3 - 7A$$
 can be written as $(I + \lambda)^3 - 7\lambda$
 $(I + \lambda)^3 - 7\lambda = I^3 + \lambda^3 + 3I^2\lambda + 3\lambda^2I - 7\lambda$
we know that $I^3 = I^2 = I$
 $= I + \lambda^3 + 3I\lambda + 3\lambda^2I - 7\lambda$
 $= I + \lambda^3 + 3\lambda + 3\lambda^2 - 7\lambda$
 $= I + (\lambda^2\lambda) + 3\lambda + 3\lambda - 7\lambda$
 $= I + (\lambda\lambda) - \lambda$
 $= I + \lambda^2 - \lambda$
From the equation(2.0.1) $\lambda^2 - \lambda = 0$
 $= I + 0$
 $= I$

3 ANSWER

Option C is the valid answer.
